

Dummit & Foote Ch. 2.5: The Lattice of Subgroups of a Group

Scott Donaldson

Aug. 2023

1. (8/11/23)

Let H and K be subgroups of G . Exhibit all possible sublattices which show only G , 1 , H , K , and their joins and intersections. What distinguishes the different drawings?

The left two lattices show the group structure when either $H \leq K$ or $K \leq H$ (they omit any subgroups of the smaller of the two, as well as any containing subgroups between the larger and G).

The next lattice shows the group structure when H and K are not comparable, their intersection consists only of the identity, and their join is all of G . The final three lattices show the cases where $H \cap K$ is a subgroup not equal to the identity, where $\langle H, K \rangle$ is a subgroup not equal to G , and where both of these occur.

2. (8/11/23)

In each of (a) to (d) list all subgroups of D_{16} that satisfy the given condition.

- (a) Subgroups that are contained in $\langle sr^2, r^4 \rangle$
 $\{1\}, \langle sr^6 \rangle, \langle sr^2 \rangle, \langle r^4 \rangle$

- (b) Subgroups that are contained in $\langle sr^7, r^4 \rangle$
 $\{1\}, \langle sr^3 \rangle, \langle sr^7 \rangle, \langle r^4 \rangle$
- (c) Subgroups that contain $\langle r^4 \rangle$
 $\langle sr^2, r^4 \rangle, \langle s, r^4 \rangle, \langle r^2 \rangle, \langle sr^3, r^4 \rangle, \langle sr^5, r^4 \rangle, \langle s, r^2 \rangle, \langle r \rangle, \langle sr, r^2 \rangle, D_{16}$
- (d) Subgroups that contain $\langle s \rangle$
 $\langle s, r^4 \rangle, \langle s, r^2 \rangle, \langle D_{16} \rangle$
